Personalized Quality Systems Limited
"Going the extra mile to help you"

The PQS Software Portfolio

We implement the right tool for every stage of your business.

Priority ERP

Full enterprise ERP — multi-currency, intercompany, approvals, integrations. Our flagship recommendation for growing Caribbean businesses.

SAGE 50cloud

Trusted accounting platform for small to mid-sized businesses. PQS is a certified SAGE partner.

Intuit QuickBooks

Industry-leading small business accounting. Cloud and desktop. PQS is Intuit certified.

Xero

Cloud-based accounting for modern businesses. Strong bank reconciliation and app ecosystem.

AccountEdge

Desktop accounting with strong inventory and simple manufacturing capability for SMEs.

Cin7 Core

Inventory and order management for product businesses — ecommerce, wholesale, retail.

Lightspeed

Retail and restaurant POS with built-in inventory and reporting.

Quickbase

Low-code business apps and workflow automation — no developer required.

Additional Services

- RFP Creation
- IT Process Mapping
- IT Project Management
- Web Hosting & Design
- Software Training
- Data Entry Services
- Inventory Software

Different by Design, Powerful by Result.

Multi-currency

Intercompany

Reports in minutes, not days

Built-in workflows

Mobile + ecommerce

Multi-warehouse

Enterprise power at a price that fits,
and room to grow into every feature

Implemented locally by

"Work smarter, not harder"

Built for your market.

Not someone else's.

A BIT ABOUT PRIORITY

Priority Software Ltd. delivers scalable **ERP** and business management solutions that help organizations streamline operations, gain **real-time** insight, and grow with confidence.

Trusted by **75,000 customers** in **40 countries**, **Priority** supports finance, supply chain, logistics, manufacturing, HR, BI, project management, and CRM across cloud or on-premise environments.

WHAT PRIORITY ERP DOES FOR T&T BUSINESSES

- Invoice in **TTD** and **USD** in the same transaction — natively
- Generate trial balances in **either currency without workarounds**
- Post **intercompany** transactions — **auto-generated** in the related entity
- Run a report in **minutes** with **five years of data**
- Approval **workflows** that **hold up** — entry, verify, approve, tracked
- In-software **Business Process Mapping** - drag and drop
- **Mobile apps** - one database, no syncing, location tracking
- **Manage** multiple warehouses, vendors, customers and inventory items

LOCAL IMPLEMENTATION BY PQS

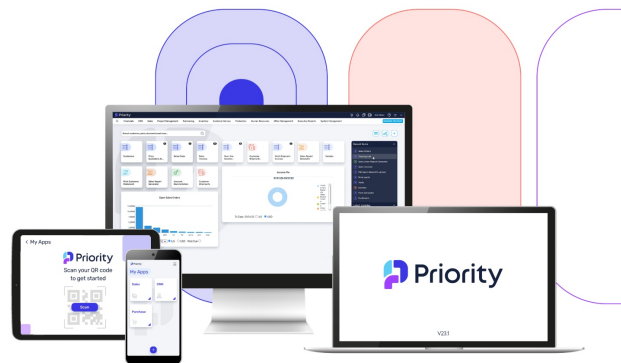

When something goes wrong with your **ERP**, who picks up the phone? With global vendors you log a ticket. With **PQS** you call a **local team** who knows your system, knows the local business environment, and **responds** without a timezone conversion.

Certified by:
Priority Software
Multiple installs
completed locally

The honest comparison.

No spin. Just the facts.

PRIORITY ERP IN PLAIN ENGLISH

Priority ERP is not the cheapest option on *every* dimension. But it is **consistently** the **best-value** enterprise platform for businesses at the **growth stage** where the right system versus the wrong one **determines what the next five years look like.**

"In this case, different is better."

— Every business that's made the switch

What Priority ERP delivers.

Five capabilities. All built in.

01 Multi-currency

Invoice in **multiple currencies**. **Trial balances** in either currency. **Intercompany** postings handled **automatically** across **related entities**.

02 Reporting speed

Five years of data. One report. Within minutes. This isn't marketing — it's something our team timed during **live** Caribbean implementations.

03 Workflow & approval engine

Entry, verification, approval — all **tracked** on a **live To-Do dashboard**. One person enters. Another verifies. Management sees everything.

04 Native integrations

Mobile systems, handheld devices, ecommerce platforms. **Data flows without manual reconciliation.**

05 The interface

Priority ERP looks different from **SAGE 50**, **QuickBooks** or **Dynamics**. Modern, fast, workflow-driven. The adjustment is shorter than clients expect. Once teams are on it, **they don't want to go back.**
